

Rewrite and add the punctuation and capital letters.

Underline the corrected word (spelling or grammar).

Clue: There is one error in each line.

marie curie grew up in warsaw poland where she was born on november 7 1867 her dad taught maths and physics and her mum was headmistress at a girls school

marie and her husband discovered two new elements for the periodic table the curies came up with the term radioactivity to describing elements that emitted strong rays in 1903 marie has become the first woman to be awarded the noble prize in physics in 1911 she won it again in chemistry and became the first person to have two such awards

when world war i started marie learned that doctors could use x-rays to help determine what was wrong with an injured soldier she came up with the idea that the x-ray machines could move from hospital to hospital in a truck marie even helped to train people to run the machines

she had good friends with fellow scientist albert einstein marie curie's research papers are still radioactive more than 100 years later
