

Building a House

Instructions Activity

Can you put the instructions in the right order?

Place your bricks inside a kiln to dry them out and make them hard and strong and coat the bricks in bitumen to waterproof them.

Add a second floor leaving the top open to provide an open air terrace. Only add tiny upstairs windows as you want to keep the house downstairs cool.

Gather up mounds of clay from the earth then form the clay into bricks using a brick mould so they are the same shape and size.

Move in and furnish your property

Fill in any gaps in the bricks with more bitumen and next paint your exterior walls white.

Layer the bricks on top of each other to create four high flat walls forming a square shape.
