

Short Division

$$78 \div 6$$

First we lay out our bus stop

$$6 \overline{) 78}$$

Next we think how many 6s fit in 7?

(If you get stuck draw 7 dots and make rings of 6)

1 group leaving 1 spare

$$\cancel{6} \overline{) 78} \quad 6 \overline{) 78} \quad 1$$

Next we ask ourselves:

How many 6s fit in 18?

$$6 \times 3 = 18$$

$$\begin{array}{r} 1 \quad 3 \\ 6 \overline{) 78} \end{array}$$

Therefore $78 \div 6 = 13$

Try the examples on the next
p. 7.
